

LA 8 Sustainability policy

Our business concept is to develop and market furniture for public spaces. Sustainable, contemporary design, high quality, functionality and competitive pricing are at the heart of everything we produce.

Skandiform meets the needs and expectations of customers through expertise, personal service and high levels of delivery reliability. We call it Scandinavian Sense.

—
Yesterday. Today. Tomorrow.

What we do is rooted in an understanding of the materials and products that we work with in order to develop and refine sustainable solutions. Whether it involves a piece of furniture, a service or a complementary product, we strive for sustainable development with constant improvements and continuous development. We strive to create a responsible, value-creating balance between the needs of our customers and stakeholders, caring for our environment, the people we influence, and good economic sense.

The sustainability policy has been created through our processes and is based on our strategy and core values. In order to ensure the continued success of our work to achieve long-term sustainability, we need to be:

- **Innovative**

Unconventional thinking and innovation mean that we dare to be different and have the courage to do things nobody else has done before.

- **Communicative**

We are communicative by maintaining an open and continuous dialogue on the company's sustainability programme and commitments, both internally and with external stakeholders.

- **Responsible**

We fulfil or exceed legal and other requirements related to our sustainability programme. We strive to maintain good working relationships throughout our entire value chain in order to create a safe and progressive work environment that minimises injuries and ill health.

- **Skilled**

We work to increase and revitalise our skills in order to ensure our policy is being adhered to, our goals are being achieved and our procedures are being followed and further developed. We create high quality products and services with a low impact on the environment.

- **Preventive**

To us, being preventive means that we identify and work to prevent all unwanted effects, risks and behaviours and tackle any problems at source. We are working to improve our environmental performance by preventing pollution, reducing waste and using our resources efficiently.
